## Summary

Software Engineer with over 4 years of experience in designing and implementing scalable software solutions. I have a diverse background in system analysis, development, and architecture, with a strong focus on delivering clean, efficient, and maintainable code. Throughout my career, I have led and contributed to a variety of projects across multiple domains, from corporate websites to complex management systems.

---

### NHC National Housing Company: Sr. Backend Developer (Laravel)

2024/10 – Now

Currently working at NHC, a government-owned company in Saudi Arabia, specializing in developing technological solutions for real estate projects.

I focus on building and maintaining scalable backend systems using Laravel, contributing to the digital transformation of the real estate sector by creating secure, efficient applications tailored to support large-scale governmental initiatives.

### AldrTech Technology: Backend – Team leader

2023/01 – 2024/09

As a Backend Developer in Laravel, I led key projects and designed a unified backend architecture for consistency and efficiency. As a Team Lead, I managed a major project, coordinated a development team, and mentored team members, while still contributing as a Backend Developer.

### Smart soft services SSS: System analyst

2022/11 – 2023/01

During my three-month at Smart Soft Services (SSS), I worked on real-world projects, including a project for automating processes at Damascus University.

This experience allowed me to gain valuable knowledge in Business Process Model and Notation (BPMN) and database design (ERD).

## Projects

---

### Tawazoun: NHC – National Housing Company

- **Description:** A high-load eligibility platform that manages land distribution in Riyadh based on a points system derived from multiple social and financial criteria. The system handles real-time user evaluations with large-scale data processing and high concurrency demands.
- **Tools Used:** Laravel Octane, Redis Sentinel, Kafka, PostgreSQL, Docker
- **My Role:** Backend Developer – designed Redis pipelines, optimized performance under load using Octane and Swoole, integrated Kafka for asynchronous processing.

### Farz: NHC – National Housing Company

- **Description:** A real estate unit subdivision platform that connects engineering offices with governmental agencies to manage requests, issue certificates, and handle approvals. Includes a robust role-permission system and task delegation workflows.
- **Tools Used:** Laravel, Redis, PostgreSQL, Docker.
- **My Role:** Backend Developer.

### Printly: self-employed – Graduation project

- **Description:** A platform for designing and printing products remotely. The project aims to attract a large number of designers to work with a profit-sharing model, where designers earn a commission on each purchased design, which can be printed on various products like T-shirts, mugs, etc.
- **Tools Used:** Laravel, Redis, PostgreSQL, Docker.
- **My Role:** Backend Developer, System Analyst, and Team Leader.

### HR System: AldrTech

- **Description:** A human resources management system designed for a large enterprise in Syria.
- **Tools Used:** Laravel, Design-patterns, OOP.
- **My Role:** Backend Developer and Team Leader.

### Learnly: self employed

- **Description:** A platform for connecting private teachers with students to facilitate language learning.
- **Tools Used:** Laravel, UML, OOP, Clean-code, Design-patterns, Agora Third Party
- **My Role:** Led the project, planned and analyzed requirements, developed backend.

### Eyadti: self employed

- **Description:** A system for managing medical appointments for doctors and patients
- **Tools Used:** Laravel, Flutter, Firebase, Clean-architecture, OOP
- **My Role:** Backend and mobile developer

**Education**

---

B.Sc. in Software Engineering  
Damascus University, Faculty of Information Engineering  
Graduation: 08-2024  
Grade: Good
